WEB-ENABLING

WHAT IT MEANS

Leveraging the power of web technologies by making internal applications accessible to users and other applications via the Internet.

WHEN YOU NEED IT

- You need to make internal applications accessible from distant locations.
- Your customers, partners and distributors need access to data from your internal systems on a regular basis.
- Your legacy applications have to be up-to-date to meet efficiency requirements without replacement.

WHAT YOU RECEIVE

- Competitive advantage due to improved customer service;
- Improved communication between employees and with suppliers, customers and partners;
- Reduced personnel costs and improved customer service;
- Maintenance and administration costs reduction due to re-use of the existing application base;
- Increased reliability and no limit on scalability.

MAINTENANCE&OPTIMIZATION

WHAT IT MEANS

Technical questions of company applications efficiency, operability and security are handled by the service-provider.

WHEN YOU NEED IT

- Company's IT infrastructure becomes too big, heavy and inflexible.
- Your company grows organically by number of personnel and /or opens new branches.
- Your company needs to concentrate on core business.

WHAT YOU RECEIVE

- Improvement of service utilization efficiency;
- Providing of service availability level guaranteed by SLA;
- Well-documented and transparent application maintenance process;
- Significant costs reduction and independence from human factor in maintenance process;
- Access to state-of-the-art technologies, professional approach to maintenance and confirmed experience of service provider.

INTEGRATION

WHAT IT MEANS

Combining different applications into one system that uses common set of data structures and rules for effective data and process sharing.

WHEN YOU NEED IT

- You have got numerous applications that use the similar data and you need to automate a business process that involves data and functionalities of different applications.
- Strategic and operational decision making requires quick access to data from different applications.
- Your company has recently experienced an M&A process or different branches use different document management systems.

WHAT YOU RECEIVE

- Increased enterprise productivity through consistent, accurate and always available data;
- Transparent manageable process joins the processes, automated by each single application in the cluster;
- Single data warehouse and simplicity of generation of composite analytical reports.

S+S-ENABLING

WHAT IT MEANS

Software delivery model and approach to the software infrastructure that combines advantages of traditional in-house hosted software with remote services available online.

WHEN YOU NEED IT

- You are not ready to invest into costly IT systems.
- You want to cut IT costs but at the same time use the newest IT solutions.
- You need to expand automation of business processes for new user groups.

WHAT YOU RECEIVE

- Large potential for an enterprise-wide team collaboration with customers;
- Guaranteed and secure access to enterprise data from any place where Internet is available;
- Minor initial investment on services launch due to reduction of hardware and software licenses purchase;
- IT Flexibility - your IT infrastructure is agile and can be adjusted to the changing needs of your business, varying from in house IT to outsourced IT.
